

12/22/25

Dear Polk County Board of Commissioners,

It is with great respect that we submit the following for your review in reference to LDCU-2025-29.

Each letter enclosed are individual letters signed by a resident of Saddlebag Lake Resort.

We kindly submit these letters in relation to the appeal for the above referenced matter.

Thank you for your time and sincere consideration.

Respectfully,

Sand Mine Communication Team

LDCU – 2025-29 Appeal

Protecting Our Environment, Health, and Community

Date: 2025-12-22

To: County Commissioners and Planning Department

Dear Commissioners and Planners,

I am writing as a resident of Saddlebag Lake Resort to express my deep concern about the proposed sand mine development appeal next to our community. As stewards of Saddlebag Lake Resorts safety, health and wellness, we rely on your commitment to uphold the values of community protection, environmental preservation, and transparent governance in all development matters.

Environmental Impact

Sand mining can inflict irreversible damage on our local ecosystem. The removal of topsoil and natural vegetation threatens the delicate balance of our environment, leading to soil erosion, water contamination, and the destruction of habitats essential for native plant and animal species. The dust generated by mining activities can degrade air quality and settle on nearby land, harming crops and gardens, and reducing the overall natural beauty of our rural area.

Health and Welfare Concerns

Numerous studies have shown that sand mines can pose significant health risks to nearby residents. Airborne particulate matter—including fine silica dust—has the strong potential to cause silicosis, lung cancer, heart disease, stroke, COPD among other health issues. Increased truck traffic and noise pollution also disrupt the peace and safety of our neighbourhoods, raising concerns about road safety and the overall quality of life.

Impact on Wildlife

Our community is home to a rich variety of wildlife, including birds, mammals, amphibians, and insects that depend on the undisturbed land surrounding our homes. The disruption and fragmentation of these habitats caused by mining operations may force species to relocate, reduce biodiversity, and undermine conservation efforts that our residents and local authorities have worked hard to maintain.

Commitment to Community Values

We appreciate the County Commissioners' ongoing dedication to managing community safety, preserving health and wellness, and ensuring transparent communication about upcoming developments. We urge you to continue honoring these commitments by rejecting the sand mine proposal near our HOA site as the Planning Board Commissioners did in an unprecedented voting result that LDCU-2025-29 is incompatible. Our community deserves to thrive in a safe, healthy, and unspoiled environment that honors Saddlebag's character and ecological integrity.

Transparency and Public Engagement

We kindly request that you provide clear and timely updates regarding the status of this development. Moreover, we ask for meaningful public consultation before any decisions are finalized, ensuring that the voices of those most affected are heard and respected.

Thank you for considering our concerns and for your steadfast dedication to the wellbeing of our community. Please do not hesitate to contact us for further information or to arrange a meeting with our HOA representatives.

Sincerely,

William Sredl

Dear Commissioners and Planners,

I am writing as a resident of Saddlebag Lake Resort to express my deep concern about the proposed sand mine development appeal next to our community. As stewards of Saddlebag Lake Resorts safety, health and wellness, we rely on your commitment to uphold the values of community protection, environmental preservation, and transparent governance in all development matters.

Environmental Impact

Sand mining can inflict irreversible damage on our local ecosystem. The removal of topsoil and natural vegetation threatens the delicate balance of our environment, leading to soil erosion, water contamination, and the destruction of habitats essential for native plant and animal species. The dust generated by mining activities can degrade air quality and settle on nearby land, harming crops and gardens, and reducing the overall natural beauty of our rural area.

Health and Welfare Concerns

Numerous studies have shown that sand mines can pose significant health risks to nearby residents. Airborne particulate matter—including fine silica dust—has the strong potential to cause silicosis, lung cancer, heart disease, stroke, COPD among other health issues. Increased truck traffic and noise pollution also disrupt the peace and safety of our neighbourhoods, raising concerns about road safety and the overall quality of life.

Impact on Wildlife

Our community is home to a rich variety of wildlife, including birds, mammals, amphibians, and insects that depend on the undisturbed land surrounding our homes. The disruption and fragmentation of these habitats caused by mining operations may force species to relocate, reduce biodiversity, and undermine conservation efforts that our residents and local authorities have worked hard to maintain.

Commitment to Community Values

We appreciate the County Commissioners' ongoing dedication to managing community safety, preserving health and wellness, and ensuring transparent communication about upcoming developments. We urge you to continue honoring these commitments by rejecting the sand mine proposal near our HOA site as the Planning Board Commissioners did in an unprecedented voting result that LDCU-2025-29 is incompatible. Our community deserves to thrive in a safe, healthy, and unspoiled environment that honors Saddlebag's character and ecological integrity.

Transparency and Public Engagement

We kindly request that you provide clear and timely updates regarding the status of this development. Moreover, we ask for meaningful public consultation before any decisions are finalized, ensuring that the voices of those most affected are heard and respected.

Thank you for considering our concerns and for your steadfast dedication to the wellbeing of our community. Please do not hesitate to contact us for further information or to arrange a meeting with our HOA representatives.

Sincerely,

Diane Murphy

Dear Commissioners and Planners,

I am writing as a resident of Saddlebag Lake Resort to express my deep concern about the proposed sand mine development appeal next to our community. As stewards of Saddlebag Lake Resorts safety, health and wellness, we rely on your commitment to uphold the values of community protection, environmental preservation, and transparent governance in all development matters.

Environmental Impact

Sand mining can inflict irreversible damage on our local ecosystem. The removal of topsoil and natural vegetation threatens the delicate balance of our environment, leading to soil erosion, water contamination, and the destruction of habitats essential for native plant and animal species. The dust generated by mining activities can degrade air quality and settle on nearby land, harming crops and gardens, and reducing the overall natural beauty of our rural area.

Health and Welfare Concerns

Numerous studies have shown that sand mines can pose significant health risks to nearby residents. Airborne particulate matter—including fine silica dust—has the strong potential to cause silicosis, lung cancer, heart disease, stroke, COPD among other health issues. Increased truck traffic and noise pollution also disrupt the peace and safety of our neighbourhoods, raising concerns about road safety and the overall quality of life.

Impact on Wildlife

Our community is home to a rich variety of wildlife, including birds, mammals, amphibians, and insects that depend on the undisturbed land surrounding our homes. The disruption and fragmentation of these habitats caused by mining operations may force species to relocate, reduce biodiversity, and undermine conservation efforts that our residents and local authorities have worked hard to maintain.

Commitment to Community Values

We appreciate the County Commissioners' ongoing dedication to managing community safety, preserving health and wellness, and ensuring transparent communication about upcoming developments. We urge you to continue honoring these commitments by rejecting the sand mine proposal near our HOA site as the Planning Board Commissioners did in an unprecedented voting result that LDCU-2025-29 is incompatible. Our community deserves to thrive in a safe, healthy, and unspoiled environment that honors Saddlebag's character and ecological integrity.

Transparency and Public Engagement

We kindly request that you provide clear and timely updates regarding the status of this development. Moreover, we ask for meaningful public consultation before any decisions are finalized, ensuring that the voices of those most affected are heard and respected.

Thank you for considering our concerns and for your steadfast dedication to the wellbeing of our community. Please do not hesitate to contact us for further information or to arrange a meeting with our HOA representatives.

Sincerely,

JAMES WARDWELL

Numerous studies have shown that sand mines can pose significant health risks to nearby residents. Airborne particulate matter—including fine silica dust—has the strong potential to cause silicosis, lung cancer, heart disease, stroke, COPD among other health issues. Increased truck traffic and noise pollution also disrupt the peace and safety of our neighbourhoods, raising concerns about road safety and the overall quality of life.

Impact on Wildlife

Our community is home to a rich variety of wildlife, including birds, mammals, amphibians, and insects that depend on the undisturbed land surrounding our homes. The disruption and fragmentation of these habitats caused by mining operations may force species to relocate, reduce biodiversity, and undermine conservation efforts that our residents and local authorities have worked hard to maintain.

Commitment to Community Values

We appreciate the County Commissioners' ongoing dedication to managing community safety, preserving health and wellness, and ensuring transparent communication about upcoming developments. We urge you to continue honoring these commitments by rejecting the sand mine proposal near our HOA site as the Planning Board Commissioners did in an unprecedented voting result that LDCU-2025-29 is incompatible. Our community deserves to thrive in a safe, healthy, and unspoiled environment that honors Saddlebag's character and ecological integrity.

Transparency and Public Engagement

We kindly request that you provide clear and timely updates regarding the status of this development. Moreover, we ask for meaningful public consultation before any decisions are finalized, ensuring that the voices of those most affected are heard and respected.

Thank you for considering our concerns and for your steadfast dedication to the wellbeing of our community. Please do not hesitate to contact us for further information or to arrange a meeting with our HOA representatives.

Sincerely,

12-22-25

LDCU – 2025-29 Appeal

Protecting Our Environment, Health, and Community

Date: 2025-12-22

To: County Commissioners and Planning Department

Dear Commissioners and Planners,

I am writing as a resident of Saddlebag Lake Resort to express my deep concern about the proposed sand mine development appeal next to our community. As stewards of Saddlebag Lake Resorts safety, health and wellness, we rely on your commitment to uphold the values of community protection, environmental preservation, and transparent governance in all development matters.

Environmental Impact

Sand mining can inflict irreversible damage on our local ecosystem. The removal of topsoil and natural vegetation threatens the delicate balance of our environment, leading to soil erosion, water contamination, and the destruction of habitats essential for native plant and animal species. The dust generated by mining activities can degrade air quality and settle on nearby land, harming crops and gardens, and reducing the overall natural beauty of our rural area.

Health and Welfare Concerns

Numerous studies have shown that sand mines can pose significant health risks to nearby residents. Airborne particulate matter—including fine silica dust—has the strong potential to cause silicosis, lung cancer, heart disease, stroke, COPD among other health issues. Increased truck traffic and noise pollution also disrupt the peace and safety of our neighbourhoods, raising concerns about road safety and the overall quality of life.

We appreciate the County Commissioners' ongoing dedication to managing community safety, preserving health and wellness, and ensuring transparent communication about upcoming developments. We urge you to continue honoring these commitments by rejecting the sand mine proposal near our HOA site as the Planning Board Commissioners did in an unprecedented voting result that LDCU-2025-29 is incompatible. Our community deserves to thrive in a safe, healthy, and unspoiled environment that honors Saddlebag's character and ecological integrity.

Transparency and Public Engagement

We kindly request that you provide clear and timely updates regarding the status of this development. Moreover, we ask for meaningful public consultation before any decisions are finalized, ensuring that the voices of those most affected are heard and respected.

Thank you for considering our concerns and for your steadfast dedication to the wellbeing of our community. Please do not hesitate to contact us for further information or to arrange a meeting with our HOA representatives.

Sincerely,

PAUL MARSH

LDCU – 2025-29 Appeal

Protecting Our Environment, Health, and Community

Date: 2025-12-22

To: County Commissioners and Planning Department

Dear Commissioners and Planners,

I am writing as a resident of Saddlebag Lake Resort to express my deep concern about the proposed sand mine development appeal next to our community. As stewards of Saddlebag Lake Resorts safety, health and wellness, we rely on your commitment to uphold the values of community protection, environmental preservation, and transparent governance in all development matters.

Environmental Impact

Sand mining can inflict irreversible damage on our local ecosystem. The removal of topsoil and natural vegetation threatens the delicate balance of our environment, leading to soil erosion, water contamination, and the destruction of habitats essential for native plant and animal species. The dust generated by mining activities can degrade air quality and settle on nearby land, harming crops and gardens, and reducing the overall natural beauty of our rural area.

Health and Welfare Concerns

Numerous studies have shown that sand mines can pose significant health risks to nearby residents. Airborne particulate matter—including fine silica dust—has the strong potential to cause silicosis, lung cancer, heart disease, stroke, COPD among other health issues. Increased truck traffic and noise pollution also disrupt the peace and safety of our neighbourhoods, raising concerns about road safety and the overall quality of life.

Impact on Wildlife

Our community is home to a rich variety of wildlife, including birds, mammals, amphibians, and insects that depend on the undisturbed land surrounding our homes. The disruption and fragmentation of these habitats caused by mining operations may force species to relocate, reduce biodiversity, and undermine conservation efforts that our residents and local authorities have worked hard to maintain.

Commitment to Community Values

We appreciate the County Commissioners' ongoing dedication to managing community safety, preserving health and wellness, and ensuring transparent communication about upcoming developments. We urge you to continue honoring these commitments by rejecting the sand mine proposal near our HOA site as the Planning Board Commissioners did in an unprecedented voting result that LDCU-2025-29 is incompatible. LDCU – 2025-29 Appeal

Protecting Our Environment, Health, and Community

Date: 2025-12-22

To: County Commissioners and Planning Department

Dear Commissioners and Planners,

I am writing as a resident of Saddlebag Lake Resort to express my deep concern about the proposed sand mine development appeal next to our community. As stewards of Saddlebag Lake Resorts safety, health and wellness, we rely on your commitment to uphold the values of community protection, environmental preservation, and transparent governance in all development matters.

Environmental Impact

Sand mining can inflict irreversible damage on our local ecosystem. The removal of topsoil and natural vegetation threatens the delicate balance of our environment, leading to soil erosion, water contamination, and the destruction of habitats essential for native plant and animal species. The dust generated by mining activities can degrade air quality and settle on nearby land, harming crops and gardens, and reducing the overall natural beauty of our rural area.

Health and Welfare Concerns

Numerous studies have shown that sand mines can pose significant health risks to nearby residents. Airborne particulate matter—including fine silica dust—has the strong potential to cause silicosis, lung cancer, heart disease, stroke, COPD among other health issues. Increased truck traffic and noise pollution also disrupt the peace and safety of our neighbourhoods, raising concerns about road safety and the overall quality of life.

Impact on Wildlife

Our community is home to a rich variety of wildlife, including birds, mammals, amphibians, and insects that depend on the undisturbed land surrounding our homes. The disruption and fragmentation of these habitats caused by mining operations may force species to relocate, reduce biodiversity, and undermine conservation efforts that our residents and local authorities have worked hard to maintain.

Commitment to Community Values

We appreciate the County Commissioners' ongoing dedication to managing community safety, preserving health and wellness, and ensuring transparent communication about upcoming developments. We urge you to continue honoring these commitments by rejecting the sand mine proposal near our HOA site as the Planning Board Commissioners did in an unprecedented voting result that LDCU-2025-29 is incompatible. Our community deserves to thrive in a safe, healthy, and unspoiled environment that honors Saddlebag's character and ecological integrity.

Transparency and Public Engagement

We kindly request that you provide clear and timely updates regarding the status of this development. Moreover, we ask for meaningful public consultation before any decisions are finalized, ensuring that the voices of those most affected are heard and respected.

Thank you for considering our concerns and for your steadfast dedication to the wellbeing of our community. Please do not hesitate to contact us for further information or to arrange a meeting with our HOA representatives.

Sincerely,

Jim Roberts

Dear Commissioners and Planners,

I am writing as a resident of Saddlebag Lake Resort to express my deep concern about the proposed sand mine development appeal next to our community. As stewards of Saddlebag Lake Resorts safety, health and wellness, we rely on your commitment to uphold the values of community protection, environmental preservation, and transparent governance in all development matters.

Environmental Impact

Sand mining can inflict irreversible damage on our local ecosystem. The removal of topsoil and natural vegetation threatens the delicate balance of our environment, leading to soil erosion, water contamination, and the destruction of habitats essential for native plant and animal species. The dust generated by mining activities can degrade air quality and settle on nearby land, harming crops and gardens, and reducing the overall natural beauty of our rural area.

Health and Welfare Concerns

Numerous studies have shown that sand mines can pose significant health risks to nearby residents. Airborne particulate matter—including fine silica dust—has the strong potential to cause silicosis, lung cancer, heart disease, stroke, COPD among other health issues. Increased truck traffic and noise pollution also disrupt the peace and safety of our neighbourhoods, raising concerns about road safety and the overall quality of life.

Impact on Wildlife

Our community is home to a rich variety of wildlife, including birds, mammals, amphibians, and insects that depend on the undisturbed land surrounding our homes. The disruption and fragmentation of these habitats caused by mining operations may force species to relocate, reduce biodiversity, and undermine conservation efforts that our residents and local authorities have worked hard to maintain.

Commitment to Community Values

We appreciate the County Commissioners' ongoing dedication to managing community safety, preserving health and wellness, and ensuring transparent communication about upcoming developments. We urge you to continue honoring these commitments by rejecting the sand mine proposal near our HOA site as the Planning Board Commissioners did in an unprecedented voting result that LDCU-2025-29 is incompatible. Our community deserves to thrive in a safe, healthy, and unspoiled environment that honors Saddlebag's character and ecological integrity.

Transparency and Public Engagement

We kindly request that you provide clear and timely updates regarding the status of this development. Moreover, we ask for meaningful public consultation before any decisions are finalized, ensuring that the voices of those most affected are heard and respected.

Thank you for considering our concerns and for your steadfast dedication to the wellbeing of our community. Please do not hesitate to contact us for further information or to arrange a meeting with our HOA representatives.

Sincerely,

Maryann Kohl 345TS

Impact on Wildlife

Our community is home to a rich variety of wildlife, including birds, mammals, amphibians, and insects that depend on the undisturbed land surrounding our homes. The disruption and fragmentation of these habitats caused by mining operations may force species to relocate, reduce biodiversity, and undermine conservation efforts that our residents and local authorities have worked hard to maintain.

Commitment to Community Values

We appreciate the County Commissioners' ongoing dedication to managing community safety, preserving health and wellness, and ensuring transparent communication about upcoming developments. We urge you to continue honoring these commitments by rejecting the sand mine proposal near our HOA site as the Planning Board Commissioners did in an unprecedented voting result that LDCU-2025-29 is incompatible. Our community deserves to thrive in a safe, healthy, and unspoiled environment that honors Saddlebag's character and ecological integrity.

Transparency and Public Engagement

We kindly request that you provide clear and timely updates regarding the status of this development. Moreover, we ask for meaningful public consultation before any decisions are finalized, ensuring that the voices of those most affected are heard and respected.

Thank you for considering our concerns and for your steadfast dedication to the wellbeing of our community. Please do not hesitate to contact us for further information or to arrange a meeting with our HOA representatives.

Sincerely,

Mary Denise Ryan

LDCU – 2025-29 Appeal

Protecting Our Environment, Health, and Community

Date: 2025-12-22

To: County Commissioners and Planning Department

Dear Commissioners and Planners,

I am writing as a resident of Saddlebag Lake Resort to express my deep concern about the proposed sand mine development appeal next to our community. As stewards of Saddlebag Lake Resorts safety, health and wellness, we rely on your commitment to uphold the values of community protection, environmental preservation, and transparent governance in all development matters.

Environmental Impact

Sand mining can inflict irreversible damage on our local ecosystem. The removal of topsoil and natural vegetation threatens the delicate balance of our environment, leading to soil erosion, water contamination, and the destruction of habitats essential for native plant and animal species. The dust generated by mining activities can degrade air quality and settle on nearby land, harming crops and gardens, and reducing the overall natural beauty of our rural area.

Health and Welfare Concerns

Numerous studies have shown that sand mines can pose significant health risks to nearby residents. Airborne particulate matter—including fine silica dust—has the strong potential to cause silicosis, lung cancer, heart disease, stroke, COPD among other health issues. Increased truck traffic and noise pollution also disrupt the peace and safety of our neighbourhoods, raising concerns about road safety and the overall quality of life.

Impact on Wildlife

Our community is home to a rich variety of wildlife, including birds, mammals, amphibians, and insects that depend on the undisturbed land surrounding our homes. The disruption and fragmentation of these habitats caused by mining operations may force species to relocate, reduce biodiversity, and undermine conservation efforts that our residents and local authorities have worked hard to maintain.

Impact on Wildlife

Our community is home to a rich variety of wildlife, including birds, mammals, amphibians, and insects that depend on the undisturbed land surrounding our homes. The disruption and fragmentation of these habitats caused by mining operations may force species to relocate, reduce biodiversity, and undermine conservation efforts that our residents and local authorities have worked hard to maintain.

Commitment to Community Values

We appreciate the County Commissioners' ongoing dedication to managing community safety, preserving health and wellness, and ensuring transparent communication about upcoming developments. We urge you to continue honoring these commitments by rejecting the sand mine proposal near our HOA site as the Planning Board Commissioners did in an unprecedented voting result that LDCU-2025-29 is incompatible. Our community deserves to thrive in a safe, healthy, and unspoiled environment that honors Saddlebag's character and ecological integrity.

Transparency and Public Engagement

We kindly request that you provide clear and timely updates regarding the status of this development. Moreover, we ask for meaningful public consultation before any decisions are finalized, ensuring that the voices of those most affected are heard and respected.

Thank you for considering our concerns and for your steadfast dedication to the wellbeing of our community. Please do not hesitate to contact us for further information or to arrange a meeting with our HOA representatives.

Sincerely,

Rebecca Zampieri

Dec. 22, 2025

LDCU – 2025-29 Appeal

Protecting Our Environment, Health, and Community

Date: 2025-12-22

To: County Commissioners and Planning Department

Dear Commissioners and Planners,

I am writing as a resident of Saddlebag Lake Resort to express my deep concern about the proposed sand mine development appeal next to our community. As stewards of Saddlebag Lake Resorts safety, health and wellness, we rely on your commitment to uphold the values of community protection, environmental preservation, and transparent governance in all development matters.

Environmental Impact

Sand mining can inflict irreversible damage on our local ecosystem. The removal of topsoil and natural vegetation threatens the delicate balance of our environment, leading to soil erosion, water contamination, and the destruction of habitats essential for native plant and animal species. The dust generated by mining activities can degrade air quality and settle on nearby land, harming crops and gardens, and reducing the overall natural beauty of our rural area.

Health and Welfare Concerns

Numerous studies have shown that sand mines can pose significant health risks to nearby residents. Airborne particulate matter—including fine silica dust—has the strong potential to cause silicosis, lung cancer, heart disease, stroke, COPD among other health issues. Increased truck traffic and noise pollution also disrupt the peace and safety of our neighbourhoods, raising concerns about road safety and the overall quality of life.

Impact on Wildlife

Our community is home to a rich variety of wildlife, including birds, mammals, amphibians, and insects that depend on the undisturbed land surrounding our homes. The disruption and fragmentation of these habitats caused by mining operations may force species to relocate, reduce biodiversity, and undermine conservation efforts that our residents and local authorities have worked hard to maintain.

Impact on Wildlife

Our community is home to a rich variety of wildlife, including birds, mammals, amphibians, and insects that depend on the undisturbed land surrounding our homes. The disruption and fragmentation of these habitats caused by mining operations may force species to relocate, reduce biodiversity, and undermine conservation efforts that our residents and local authorities have worked hard to maintain.

Commitment to Community Values

We appreciate the County Commissioners' ongoing dedication to managing community safety, preserving health and wellness, and ensuring transparent communication about upcoming developments. We urge you to continue honoring these commitments by rejecting the sand mine proposal near our HOA site as the Planning Board Commissioners did in an unprecedented voting result that LDCU-2025-29 is incompatible. Our community deserves to thrive in a safe, healthy, and unspoiled environment that honors Saddlebag's character and ecological integrity.

Transparency and Public Engagement

We kindly request that you provide clear and timely updates regarding the status of this development. Moreover, we ask for meaningful public consultation before any decisions are finalized, ensuring that the voices of those most affected are heard and respected.

Thank you for considering our concerns and for your steadfast dedication to the wellbeing of our community. Please do not hesitate to contact us for further information or to arrange a meeting with our HOA representatives.

Sincerely,

ALBERT W SMART JR

95 Silvergide LAKE WALES 33848

LDCU – 2025-29 Appeal

Protecting Our Environment, Health, and Community

Date: 2025-12-22

To: County Commissioners and Planning Department

Dear Commissioners and Planners,

I am writing as a resident of Saddlebag Lake Resort to express my deep concern about the proposed sand mine development appeal next to our community. As stewards of Saddlebag Lake Resorts safety, health and wellness, we rely on your commitment to uphold the values of community protection, environmental preservation, and transparent governance in all development matters.

Environmental Impact

Sand mining can inflict irreversible damage on our local ecosystem. The removal of topsoil and natural vegetation threatens the delicate balance of our environment, leading to soil erosion, water contamination, and the destruction of habitats essential for native plant and animal species. The dust generated by mining activities can degrade air quality and settle on nearby land, harming crops and gardens, and reducing the overall natural beauty of our rural area.

Health and Welfare Concerns

Numerous studies have shown that sand mines can pose significant health risks to nearby residents. Airborne particulate matter—including fine silica dust—has the strong potential to cause silicosis, lung cancer, heart disease, stroke, COPD among other health issues. Increased truck traffic and noise pollution also disrupt the peace and safety of our neighbourhoods, raising concerns about road safety and the overall quality of life.

Impact on Wildlife

Our community is home to a rich variety of wildlife, including birds, mammals, amphibians, and insects that depend on the undisturbed land surrounding our homes. The disruption and fragmentation of these habitats caused by mining operations may force species to relocate, reduce biodiversity, and undermine conservation efforts that our residents and local authorities have worked hard to maintain.

The disruption and fragmentation of these habitats caused by mining operations may force species to relocate, reduce biodiversity, and undermine conservation efforts that our residents and local authorities have worked hard to maintain.

Commitment to Community Values

We appreciate the County Commissioners' ongoing dedication to managing community safety, preserving health and wellness, and ensuring transparent communication about upcoming developments. We urge you to continue honoring these commitments by rejecting the sand mine proposal near our HOA site as the Planning Board Commissioners did in an unprecedented voting result that LDCU-2025-29 is incompatible. Our community deserves to thrive in a safe, healthy, and unspoiled environment that honors Saddlebag's character and ecological integrity.

Transparency and Public Engagement

We kindly request that you provide clear and timely updates regarding the status of this development. Moreover, we ask for meaningful public consultation before any decisions are finalized, ensuring that the voices of those most affected are heard and respected.

Thank you for considering our concerns and for your steadfast dedication to the wellbeing of our community. Please do not hesitate to contact us for further information or to arrange a meeting with our HOA representatives.

Sincerely,

Deniele R. Pahl

LDCU – 2025-29 Appeal

Protecting Our Environment, Health, and Community

Date: 2025-12-22

To: County Commissioners and Planning Department

Dear Commissioners and Planners,

I am writing as a resident of Saddlebag Lake Resort to express my deep concern about the proposed sand mine development appeal next to our community. As stewards of Saddlebag Lake Resorts safety, health and wellness, we rely on your commitment to uphold the values of community protection, environmental preservation, and transparent governance in all development matters.

Environmental Impact

Sand mining can inflict irreversible damage on our local ecosystem. The removal of topsoil and natural vegetation threatens the delicate balance of our environment, leading to soil erosion, water contamination, and the destruction of habitats essential for native plant and animal species. The dust generated by mining activities can degrade air quality and settle on nearby land, harming crops and gardens, and reducing the overall natural beauty of our rural area.

Health and Welfare Concerns

Numerous studies have shown that sand mines can pose significant health risks to nearby residents. Airborne particulate matter—including fine silica dust—has the strong potential to cause silicosis, lung cancer, heart disease, stroke, COPD among other health issues. Increased truck traffic and noise pollution also disrupt the peace and safety of our neighbourhoods, raising concerns about road safety and the overall quality of life.

Impact on Wildlife

Our community is home to a rich variety of wildlife, including birds, mammals, amphibians, and insects that depend on the undisturbed land surrounding our homes. The disruption and fragmentation of these habitats caused by mining operations may force species to relocate, reduce biodiversity, and undermine conservation efforts that our residents and local authorities have worked hard to maintain.

Commitment to Community Values

We appreciate the County Commissioners' ongoing dedication to managing community safety, preserving health and wellness, and ensuring transparent communication about upcoming developments. We urge you to continue honoring these commitments by rejecting the sand mine proposal near our HOA site as the Planning Board Commissioners did in an unprecedented voting result that LDCU-2025-29 is incompatible. Impact on Wildlife

Our community is home to a rich variety of wildlife, including birds, mammals, amphibians, and insects that depend on the undisturbed land surrounding our homes. The disruption and fragmentation of these habitats caused by mining operations may force species to relocate, reduce biodiversity, and undermine conservation efforts that our residents and local authorities have worked hard to maintain.

Commitment to Community Values

We appreciate the County Commissioners' ongoing dedication to managing community safety, preserving health and wellness, and ensuring transparent communication about upcoming developments. We urge you to continue honoring these commitments by rejecting the sand mine proposal near our HOA site as the Planning Board Commissioners did in an unprecedented voting result that LDCU-2025-29 is incompatible. Our community deserves to thrive in a safe, healthy, and unspoiled environment that honors Saddlebag's character and ecological integrity.

Transparency and Public Engagement

We kindly request that you provide clear and timely updates regarding the status of this development. Moreover, we ask for meaningful public consultation before any decisions are finalized, ensuring that the voices of those most affected are heard and respected.

Thank you for considering our concerns and for your steadfast dedication to the wellbeing of our community. Please do not hesitate to contact us for further information or to arrange a meeting with our HOA representatives.

Sincerely,

Steven Gillies

LDCU – 2025-29 Appeal

Protecting Our Environment, Health, and Community

Date: 2025-12-22

To: County Commissioners and Planning Department

Dear Commissioners and Planners,

I am writing as a resident of Saddlebag Lake Resort to express my deep concern about the proposed sand mine development appeal next to our community. As stewards of Saddlebag Lake Resorts safety, health and wellness, we rely on your commitment to uphold the values of community protection, environmental preservation, and transparent governance in all development matters.

Environmental Impact

Sand mining can inflict irreversible damage on our local ecosystem. The removal of topsoil and natural vegetation threatens the delicate balance of our environment, leading to soil erosion, water contamination, and the destruction of habitats essential for native plant and animal species. The dust generated by mining activities can degrade air quality and settle on nearby land, harming crops and gardens, and reducing the overall natural beauty of our rural area.

Health and Welfare Concerns

Numerous studies have shown that sand mines can pose significant health risks to nearby residents. Airborne particulate matter—including fine silica dust—has the strong potential to cause silicosis, lung cancer, heart disease, stroke, COPD among other health issues. Increased truck traffic and noise pollution also disrupt the peace and safety of our neighbourhoods, raising concerns about road safety and the overall quality of life.

Impact on Wildlife

Our community is home to a rich variety of wildlife, including birds, mammals, amphibians, and insects that depend on the undisturbed land surrounding our homes. The disruption and fragmentation of these habitats caused by mining operations may force species to relocate, reduce biodiversity, and undermine conservation efforts that our residents and local authorities have worked hard to maintain.

Impact on Wildlife

Our community is home to a rich variety of wildlife, including birds, mammals, amphibians, and insects that depend on the undisturbed land surrounding our homes. The disruption and fragmentation of these habitats caused by mining operations may force species to relocate, reduce biodiversity, and undermine conservation efforts that our residents and local authorities have worked hard to maintain.

Commitment to Community Values

We appreciate the County Commissioners' ongoing dedication to managing community safety, preserving health and wellness, and ensuring transparent communication about upcoming developments. We urge you to continue honoring these commitments by rejecting the sand mine proposal near our HOA site as the Planning Board Commissioners did in an unprecedented voting result that LDCU-2025-29 is incompatible. Our community deserves to thrive in a safe, healthy, and unspoiled environment that honors Saddlebag's character and ecological integrity.

Transparency and Public Engagement

We kindly request that you provide clear and timely updates regarding the status of this development. Moreover, we ask for meaningful public consultation before any decisions are finalized, ensuring that the voices of those most affected are heard and respected.

Thank you for considering our concerns and for your steadfast dedication to the wellbeing of our community. Please do not hesitate to contact us for further information or to arrange a meeting with our HOA representatives.

Sincerely,

Cindy Barnicz-Hebert

LDCU – 2025-29 Appeal

Protecting Our Environment, Health, and Community

Date: 2025-12-22

To: County Commissioners and Planning Department

Dear Commissioners and Planners,

I am writing as a resident of Saddlebag Lake Resort to express my deep concern about the proposed sand mine development appeal next to our community. As stewards of Saddlebag Lake Resorts safety, health and wellness, we rely on your commitment to uphold the values of community protection, environmental preservation, and transparent governance in all development matters.

Environmental Impact

Sand mining can inflict irreversible damage on our local ecosystem. The removal of topsoil and natural vegetation threatens the delicate balance of our environment, leading to soil erosion, water contamination, and the destruction of habitats essential for native plant and animal species. The dust generated by mining activities can degrade air quality and settle on nearby land, harming crops and gardens, and reducing the overall natural beauty of our rural area.

Health and Welfare Concerns

Numerous studies have shown that sand mines can pose significant health risks to nearby residents. Airborne particulate matter—including fine silica dust—has the strong potential to cause silicosis, lung cancer, heart disease, stroke, COPD among other health issues. Increased truck traffic and noise pollution also disrupt the peace and safety of our neighbourhoods, raising concerns about road safety and the overall quality of life.

Impact on Wildlife

Our community is home to a rich variety of wildlife, including birds, mammals, amphibians, and insects that depend on the undisturbed land surrounding our homes. The disruption and fragmentation of these habitats caused by mining operations may force species to relocate, reduce biodiversity, and undermine conservation efforts that our residents and local authorities have worked hard to maintain.

Impact on Wildlife

Our community is home to a rich variety of wildlife, including birds, mammals, amphibians, and insects that depend on the undisturbed land surrounding our homes. The disruption and fragmentation of these habitats caused by mining operations may force species to relocate, reduce biodiversity, and undermine conservation efforts that our residents and local authorities have worked hard to maintain.

Commitment to Community Values

We appreciate the County Commissioners' ongoing dedication to managing community safety, preserving health and wellness, and ensuring transparent communication about upcoming developments. We urge you to continue honoring these commitments by rejecting the sand mine proposal near our HOA site as the Planning Board Commissioners did in an unprecedented voting result that LDCU-2025-29 is incompatible. Our community deserves to thrive in a safe, healthy, and unspoiled environment that honors Saddlebag's character and ecological integrity.

Transparency and Public Engagement

We kindly request that you provide clear and timely updates regarding the status of this development. Moreover, we ask for meaningful public consultation before any decisions are finalized, ensuring that the voices of those most affected are heard and respected.

Thank you for considering our concerns and for your steadfast dedication to the wellbeing of our community. Please do not hesitate to contact us for further information or to arrange a meeting with our HOA representatives.

Sincerely,

1/22/25

LDCU – 2025-29 Appeal

Protecting Our Environment, Health, and Community

Date: 2025-12-22

To: County Commissioners and Planning Department

Dear Commissioners and Planners,

I am writing as a resident of Saddlebag Lake Resort to express my deep concern about the proposed sand mine development appeal next to our community. As stewards of Saddlebag Lake Resorts safety, health and wellness, we rely on your commitment to uphold the values of community protection, environmental preservation, and transparent governance in all development matters.

Environmental Impact

Sand mining can inflict irreversible damage on our local ecosystem. The removal of topsoil and natural vegetation threatens the delicate balance of our environment, leading to soil erosion, water contamination, and the destruction of habitats essential for native plant and animal species. The dust generated by mining activities can degrade air quality and settle on nearby land, harming crops and gardens, and reducing the overall natural beauty of our rural area.

Health and Welfare Concerns

Numerous studies have shown that sand mines can pose significant health risks to nearby residents. Airborne particulate matter—including fine silica dust—has the strong potential to cause silicosis, lung cancer, heart disease, stroke, COPD among other health issues. Increased truck traffic and noise pollution also disrupt the peace and safety of our neighbourhoods, raising concerns about road safety and the overall quality of life.

Impact on Wildlife

Our community is home to a rich variety of wildlife, including birds, mammals, amphibians, and insects that depend on the undisturbed land surrounding our homes. The disruption and fragmentation of these habitats caused by mining operations may force species to relocate, reduce biodiversity, and undermine conservation efforts that our residents and local authorities have worked hard to maintain.

Impact on Wildlife

Our community is home to a rich variety of wildlife, including birds, mammals, amphibians, and insects that depend on the undisturbed land surrounding our homes. The disruption and fragmentation of these habitats caused by mining operations may force species to relocate, reduce biodiversity, and undermine conservation efforts that our residents and local authorities have worked hard to maintain.

Commitment to Community Values

We appreciate the County Commissioners' ongoing dedication to managing community safety, preserving health and wellness, and ensuring transparent communication about upcoming developments. We urge you to continue honoring these commitments by rejecting the sand mine proposal near our HOA site as the Planning Board Commissioners did in an unprecedented voting result that LDCU-2025-29 is incompatible. Our community deserves to thrive in a safe, healthy, and unspoiled environment that honors Saddlebag's character and ecological integrity.

Transparency and Public Engagement

We kindly request that you provide clear and timely updates regarding the status of this development. Moreover, we ask for meaningful public consultation before any decisions are finalized, ensuring that the voices of those most affected are heard and respected.

Thank you for considering our concerns and for your steadfast dedication to the wellbeing of our community. Please do not hesitate to contact us for further information or to arrange a meeting with our HOA representatives.

Sincerely,

Loretta Garcia

LDCU – 2025-29 Appeal

Protecting Our Environment, Health, and Community

Date: 2025-12-22

To: County Commissioners and Planning Department

Dear Commissioners and Planners,

I am writing as a resident of Saddlebag Lake Resort to express my deep concern about the proposed sand mine development appeal next to our community. As stewards of Saddlebag Lake Resorts safety, health and wellness, we rely on your commitment to uphold the values of community protection, environmental preservation, and transparent governance in all development matters.

Environmental Impact

Sand mining can inflict irreversible damage on our local ecosystem. The removal of topsoil and natural vegetation threatens the delicate balance of our environment, leading to soil erosion, water contamination, and the destruction of habitats essential for native plant and animal species. The dust generated by mining activities can degrade air quality and settle on nearby land, harming crops and gardens, and reducing the overall natural beauty of our rural area.

Health and Welfare Concerns

Numerous studies have shown that sand mines can pose significant health risks to nearby residents. Airborne particulate matter—including fine silica dust—has the strong potential to cause silicosis, lung cancer, heart disease, stroke, COPD among other health issues. Increased truck traffic and noise pollution also disrupt the peace and safety of our neighbourhoods, raising concerns about road safety and the overall quality of life.

Impact on Wildlife

Our community is home to a rich variety of wildlife, including birds, mammals, amphibians, and insects that depend on the undisturbed land surrounding our homes. The disruption and fragmentation of these habitats caused by mining operations may force species to relocate, reduce biodiversity, and undermine conservation efforts that our residents and local authorities have worked hard to maintain.
