Ms. Susan Pelz, P.E. Mr. Beau McCall Polk County Solid Waste Division 10 Environmental Loop S Winter Haven, Florida 33880

Subject: Change Order No. 1 - Proposal for Assessment and Engineering Services

Polk County Southeast Landfill (Site 203)

2250 Golfview Cutoff Road, Lake Wales, Polk County, Florida

Dear Ms. Pelz and Mr. McCall:

As requested, Geosyntec Consultants (Geosyntec) has prepared Change Order No. 1 to the Original Proposal for Assessment and Engineering Services associated with the Polk County Southeast Landfill (Site 203) located in Lake Wales, Florida. The work proposed encompasses activities to comply with the Florida Department of Environmental Protection (FDEP) Consent Order 24-2524 effective 15 January 2025 and pursuant to Polk County's Request for Proposal No. 24-654.

SUMMARY OF ACTIVITIES ASSOCIATED WITH CHANGE ORDER NO. 1

A summary of the services associated with Change Order No. 1 is provided below and organized based upon the phases and tasks of work presented in the Original Proposal for Assessment and Engineering Services (Phase 1 – Assessment; Phase 2 – Remediation; Phase 3 – Closure Design and Permitting; and Phase 4 – Bid Support and Construction Quality Assurance). The services within this Change Order have been previously approved by Polk County Solid Waste Division (PCSWD) prior to the completion of work.

PHASE 1 TASK DETAILS

Task 1 - Health and Safety Planning - No changes requested.

Task 2 – Field Planning and Site Reconnaissance – No changes requested.

Task 3 – Assessment Work Plan Preparation

The remaining budget is proposed for future meetings with PSCWD during review/completion of the Site Assessment Report.

Task 4 - FDEP Meeting

2025 (8) August_Polk Co_Proposal for Assessment and Engineering Services_CO1_Final_rev 1

The remaining budget is proposed for future meetings with PCSWD, as required.

Task 5 – Assessment Activities

Direct Push Technology Groundwater Screening Initial Assessment

Based on the results of the direct push technology (DPT) groundwater screening, two additional days of DPT groundwater sampling (original assumption of 13, 12-hr days to complete) were approved by PCSWD to complete the groundwater assessment. The two (2) additional 12-hr days (15 in total) allowed for the completion of soil and/or groundwater sampling at three (3) additional DPT locations with sampling depths ranging from land surface up to 99 feet below land surface (ft bls) (original assumption of 10 borings to a maximum depth of 70 ft bls). The two additional days included rental of field equipment, consisting of a YSI Pro Plus meter and turbidity meter are included.

Monitoring Well Installation

Following review of the DPT groundwater screening results, a final monitoring well network was recommended to delineate the observed groundwater impacts. The final monitoring well network was approved by PCSWD and FDEP and consisted of four (4) shallow monitoring wells screened from 50 to 60 ft bls and two (2) deep monitoring wells screened from 100-110 ft bls. The original monitoring well network consisted of six shallow monitoring wells screened from 40 to 50 ft bls. Due to the change in scope, Geosyntec procured new quotes for monitoring installation activities, summarized in the table below and coordinated and contracted two separate drilling mobilizations.

Scope of Work	Original Cost ¹	New Cost ¹
Installation of 6, 50-ft shallow monitoring wells by	\$26,743	
Action Environmental		-\$26,743
(assumed 5, 12-hr days to complete work; 60 hrs)		
Installation of 4, 60-ft shallow monitoring wells by	Not applicable	\$19,1322
Action Environmental		
(required 4, 12-hr days to complete work; 48 hrs)		
Installation of 2, 110-ft deep monitoring wells by	Not applicable	$$22,650^2$
Preferred Drilling Solutions		
(required 3, 12-hr days to complete work; 36 hrs)		

The shallow monitoring wells were screened from approximately 50-60 ft bls using hollow stem auger drilling methods and the surface completion of the wells was changed to include a flushmounted manhole with a single bollard at each location. The deep monitoring wells were screened

¹ See Subcontractor section within Attachment 2 on page 10 of this change order.

² Procured updated proposal due to change in scope that included additional drilling support to ensure scope of work completed within schedule.

from approximately 100-110 ft bls using sonic drilling methods. The monitoring wells were constructed with 2-inch diameter Schedule 40 poly-vinyl chloride (PVC) riser approximately 3 feet above land surface, ten feet of Schedule 40 PVC 0.006-inch slotted screen with a 30/45 sand pack one foot above the screen interval, one foot of 30/65 sand to seal the sand pack, and Portland type I/II cement from the sand seal to land surface. Monitoring wells were completed with an aboveground protective cover within a 2-foot by 2-foot by 4-inch-thick concrete pad surrounded by two bollards. Geosyntec has included 24 additional labor hours for a staff professional to complete the monitoring well installations at the Site. Geosyntec has also included 12 additional hours for project management, coordination, contracting, and field communications (original assumption included 12 hours).

Groundwater Sampling

During groundwater sampling activities, PCSWD requested the collection of two surface water samples from the nearby ponds. This change order includes four (4) additional labor hours for Geosyntec to coordinate and collect two surface water samples with analysis of the samples completed by the analytical laboratory Eurofins for benzene and vinyl chloride by EPA Method 8260 (no effort was included in the original proposal).

Surveying

To support the closure design, PCSWD authorized additional survey efforts associated with the fence line around the landfill. This additional task was completed during the monitoring well survey for an additional subcontractor charge of \$2,995. Geosyntec has also included eight (8) additional labor hours to support communications with PCSWD to obtain needed survey data, coordinate and contract with the survey for the additional work required, and oversee surveying to ensure accurate completion of scope (no effort was included in original proposal).

<u>Task 6 – Assessment Report Preparation</u> – No changes requested.

PHASE 3 DETAILED TASKS

<u>Task 1 – Closure Alternative Evaluation, Costing, and Selection</u> – No changes requested.

Task 2 – Closure Design – No changes requested.

Task 3 - Solid Waste Permitting - No changes requested.

COST ESTIMATE

The estimated cost for the scope of services in Change Order No.1 is provided below. Further breakdown of the below referenced costs is provided within Attachment 2 of this change order proposal.

	Phase / Task	Labor Hours	Labor	Direct Expenses	Laboratory Cost	Subcontractor Cost	Budget
Phase 1 -	- Assessment						
Task 1	Health and Safety Planning			No cha	nges requeste	d	
Task 2	Field Planning and Site Reconnaissance			No cha	nges requeste	d	
Task 3	Assessment Work Plan Preparation			No budget	changes reque	ested	
Task 4	FDEP Meeting			No budget	changes reque	ested	
Task 5	Assessment Activities	72	\$15,505	\$181	\$252	\$23,134	\$39,072
Task 6	Assessment Report Preparation			No cha	nges requeste	d	
Phase 1 -	- Assessment Subtotals	72	\$15,505	\$181	\$252	\$23,134	\$39,072
Phase 2 -	Remediation (No specific tasks or costs pro	posed at th	nis time)				
Phase 3 -	- Closure Design and Engineering				-71.LY		
Task 1	Closure Alternative Evaluation, Costing, and Selection			No cha	nges requeste	d	
Task 2	Closure Design			No cha	nges requeste	d	
Task 3	Solid Waste Permitting			No cha	nges requeste	d	
Phase 3 -	- Closure Design and Engineering Subtotals			No cha	nges requeste	d	
Phase 4 -	- Construction Quality Assurance (No specifi	c tasks or	costs propos	sed at this tin	ne)		7/-
	Phase 1 and Phase 3 Totals		\$15,505	\$181	\$252	\$23,134	\$39,072

Geosyntec will provide the services described in this proposal on a time and materials not-to-exceed basis in accordance with the terms and conditions of the agreement between PCSWD and Geosyntec. Our proposed rates used to generate the above cost are included in **Attachment 1**. The estimated budget for performing these services includes the labor and materials for Geosyntec and our team members (subcontractors) believed necessary to complete the scope of work described in this proposal. Should the Site conditions differ, and/or the required scope of work change, affecting the cost to complete this effort, revised cost estimates will be provided. Detailed cost information and subcontractor bids are presented in **Attachment 2**.

CLOSURE

Geosyntec appreciates the opportunity to provide continued engineering support on this project. Should you have any questions or need additional information, please do not hesitate to contact us.

Sincerely,

Matthew Wissler, P.G.

Senior Principal Hydrogeologist

Rachel A. Klinger, P.E., BCEE

Senior Principal Engineer

Re: Polk County SELF Soil and Groundwater Sampling

Dear M. Tuttle:

In accordance with your request, Action Environmental is pleased to provide you with a cost estimate for the soil borings, groundwater sampling and well installation at Golfview Cutoff Road in Babson Park. We understand the scope of work includes the following:

SCOPE OF SERVICES

- Public utility location three business days before work begins.
- Daily pre-job safety meeting to discuss applicable work hazards.
- Permitting of all monitoring wells through the SWFWMD.
- Clear each borehole by hand to 5 feet using hand augers or posthole diggers
- 10 continuous DPT soil borings to 80 feet or refusal. The borings will be done using macrocore samplers. All soils will be drummed.
- Groundwater sampling in the 10 soil boreholes. Groundwater samples will be taken using DPT and a groundwater sampling points. Samples will be pumped directly through the drilling rods using a

peristaltic pump. Each borehole will have up to 18 intervals or samples per borehole. All development water will be drummed.

Installation of six monitoring wells using hollow stem augers. Each well will be up to 70 feet deep with 10 feet of .006 slotted 2 inch diameter screen. A 30/45 silica sand pack will be used to 2 feet above the screen, with at least 2 feet of 30/65 sealing sand pack layer, and grouted to 3 inches below land surface. All drill cuttings will be drummed. Wells will be developed using a submersible pump. All development water will be drummed. Wells will be finished with a 2x2 concrete pad 6

inches thick, with a 4 inch aluminum stickup well cover. Each well MW total: steel bollards installed for protection.

Staging of drums.

Mob - \$2750/2 = \$1,375

Permitting = \$150

Hotel/Per Diem = 6*\$600 = \$3,600

Drilling Crew = 6*\$1950 = \$11,700 Materials = \$3588 + \$5130 = \$8,718

Drums - 15*\$80 = \$1,200

\$26,743

ESTIMATED COSTS

Removed cost associated with original scope of monitoring wells.

Task	Quantity	Units	Rate	Extended
Mob/Demob, Vehicles, and Fuel	1	LS	\$2,750.00	\$2,750.00
Permitting	1	LS	\$150.00	\$150.00
Hotel/Per Diem	16	Nights	\$600.00	\$9,600.00
Drilling Crew	18	Days	\$1,950.00	\$35,100.00
Sampling Materials (Groundwater and Soil Sampling)	1	LS	\$2,700.00	\$2,700.00
Monitoring Well Materials (screen, casing, caps, plug, sand and grout)	6	EA	\$598.00	\$3,588.00
Well Completion Materials (aluminum stickup well cover, concrete, and bollards)	6	EA	\$855.00	\$5,130.00
Drums	35	EA	\$80.00	\$2,800.00
			TOTAL	\$61,818.00

CONDITIONS and EXCLUSIONS

- Project budget as a per day charge, client will be charged for the number of days onsite. Because of the nature of groundwater sampling, this may exceed 18 days depending on the speed of the groundwater sampling. Client will be charged for actual amount of days needed to complete the scope.
 18 is an estimate.
- Drums must be staged on asphalt or concrete surface.
- Drums are an estimate. The client will be invoiced for actual amount of total drums used.
- No guarantee that groundwater samples can be obtained using a peristaltic pump at greater depths than 30 to 40 feet. Action is not responsible if samples can't be obtained using a peristaltic pump.
- Boreholes will be abandoned using Portland cement and tremie pipe. Boreholes will not be pressure grouted.
- Drums are just an estimate, the total number of drums used will be invoiced.

- DPT soil sampling has limitations. If the ground is too hard at certain depths, samples will not be able
 to be obtained from those depths. Sampling is up to 80 feet or refusal.
- Assumes equipment and/or trucks may be able to be left onsite overnight at Action's responsibility.
- Does not include private utility location.
